

Note: You are required to complete this assignment independently without any outside collaboration.

GOOD LUCK!

For Instructions, kindly refer next 4 pages.

1. Design a Shopping List making WebApp with the following components:
 - a. A form with required input controls to accept user shopping list product with quantity.
 - b. A table to display accepted user products with quantity in shopping list along with a remove button to remove from the list.

Shopping List

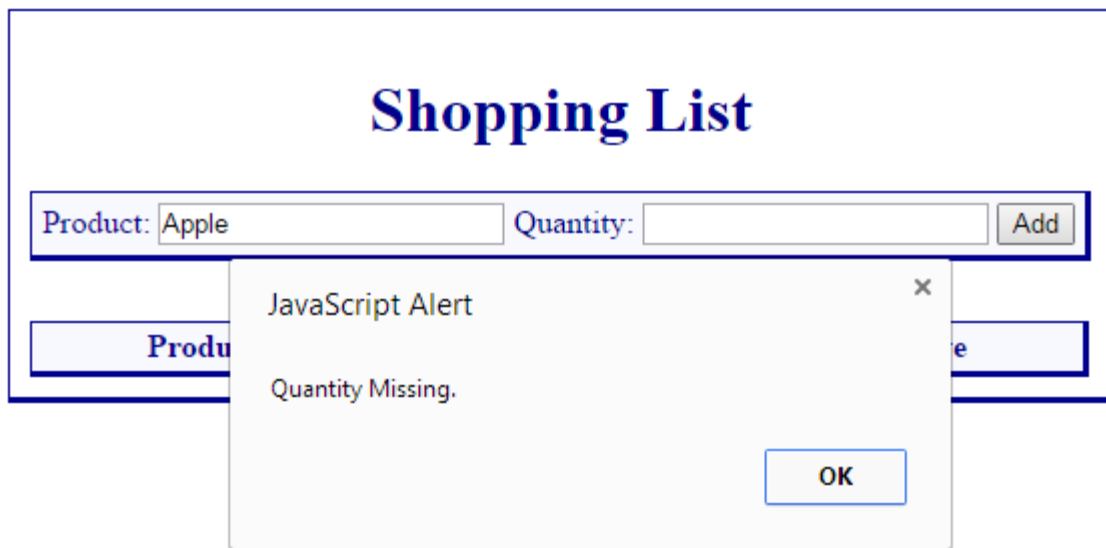

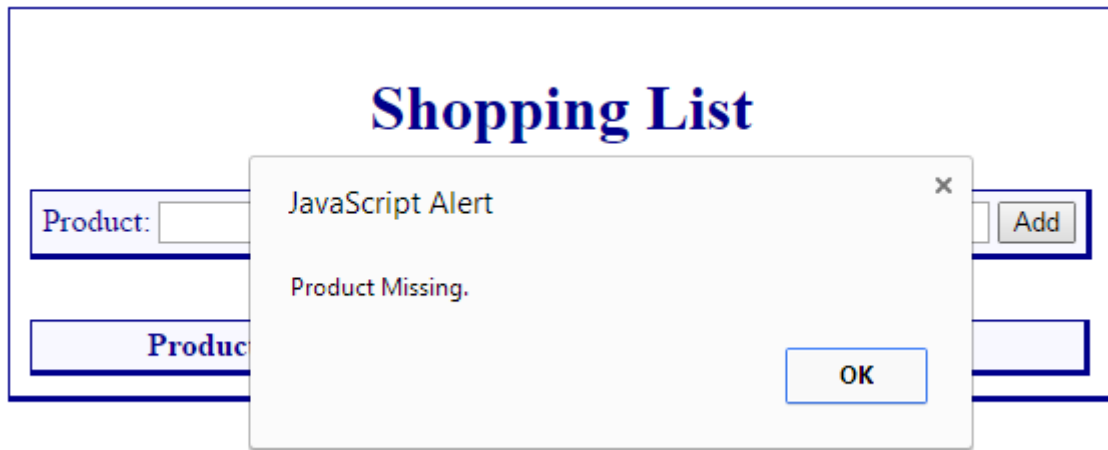

Product:

Quantity:

Add

Product	Quantity	Remove
---------	----------	--------

2. On clicking Add button
 - a. Verify user has entered Product and Quantity information.
 - b. If information is missing show suitable message to user.

3. After verifying the product and quantity information
- Add the same in table along with a remove button.
 - After adding the product/quantity in table, make sure to clear the form automatically.

Shopping List

Product: Quantity:

Product	Quantity	Remove
Apple	5lb	<input type="button" value="Remove"/>

Shopping List

Product: Quantity:

Product	Quantity	Remove
Apple	5lb	<input type="button" value="Remove"/>
Grape	2lb	<input type="button" value="Remove"/>
Orange	4lb	<input type="button" value="Remove"/>

4. On clicking the remove button, specific product/quantity from shopping list must be removed.

Shopping List

Product:

Quantity:

Add

Product	Quantity	Remove
Apple	5lb	<div>Remove</div>
Orange	4lb	<div>Remove</div>
